			ear 7 - Geography			
Curriculum intent	The aim of the geography curriculum in Year 7 is to enable students to gain an understanding of the world and how it works. Students will gain this understanding through investigating contemporary issues in geography. Year 7 is a key concept base year, ensuring that regardless of student starting point, and/or previous experience of geography, all students have a basic and sound understanding of key geographical concepts, skills and sense of place, which will deepen their understanding further developing their schema. These key skills include the ability to locate places on a local, national a global scale, to read, interpret and analyse maps and graphs, and to be able to identify key geographical features in contrasting environments. We aim to ensure that all our geographers build the confidence to successfully utilise the tier 3 vocabulary and complex terminology that we teach to develop oracy and comprehension in and beyond their geography lessons, always ensuring that our classroom's are vocabulary rich.					
Term	Topic 1 Shaping Places- Longdendale	Topic 2 Distinctive Landscapes: The UK	Topic 3 Fragile Environments: Global and Kiribati	Topic 4 World Cities: Global and Singapore	Topic 5 The Middle East: Africa and Asia	
Knowledge	 The contributing human and physical factors that go towards shaping a place. How the physical factors shape a place How the historical factors shape a place How human intervention can change the character of a place What factors have shaped Longdendale over time Human and physical interventions that have changed the character of Longdendale. 	 Physical processes that shape the land Coastal, Fluvial and Glaciated landforms created by physical processes (erosion and weathering) Importance of the physical landscapes to people Conflicts that arise in the physical landscapes Hard and soft engineering strategies Impacts of climate change on the physical landscape 	 The fragility and interdependence of ecosystems The importance of desertification and why humans should be concerned The importance of the polar regions to humans Why our oceans need to be protected Why Coral as an ecosystem must be protected Sinking Islands - the responsibility for the damage to fragile environments lies with humans (Kiribati) 	 How urban environments dominate our globalising world. How urbanisation is driving changes to city demographics Why the consumption of resources in cities is unsustainable How air quality in cities is becoming unmanageable, and what is being done to protect the environment and health Singapore is future-proofed- the development of a mega city 	 Comparison of the Middle eastern climate and topography The impact of economic migration or the Middle East The importance of oil as a vital resource in the Middle East, and what they are doing to diversify Why is tourism vital for stability in the UAE How continuing water conflict is going to shape the Middle East future How the future of the Middle East is sustainable

Human intervention has changed the character of Longdendale. Do you agree?	Using the diagram, explain how erosion and weathering interact to form waterfalls.	Using figure 1, describe the climate of Pheonix Arizona.	"Study the source which represents the number of deaths from outdoor air pollution (2017). Identify differences between countries and suggest reasons why these differences exist."	Why are the physical and human features that attract tourism important for maintaining stability in the UAE?
